

Accepted Manuscript

The effects of the interface on microstructure and rheo-mechanical properties of polyamide 6/cellulose nanocrystal nanocomposites prepared by *in-situ* ring-opening polymerization and subsequent melt extrusion

Shahab Kashani Rahimi, Joshua U. Otaigbe

PII: S0032-3861(17)30860-1

DOI: [10.1016/j.polymer.2017.08.064](https://doi.org/10.1016/j.polymer.2017.08.064)

Reference: JPOL 19966

To appear in: *Polymer*

Received Date: 15 June 2017

Revised Date: 23 August 2017

Accepted Date: 30 August 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

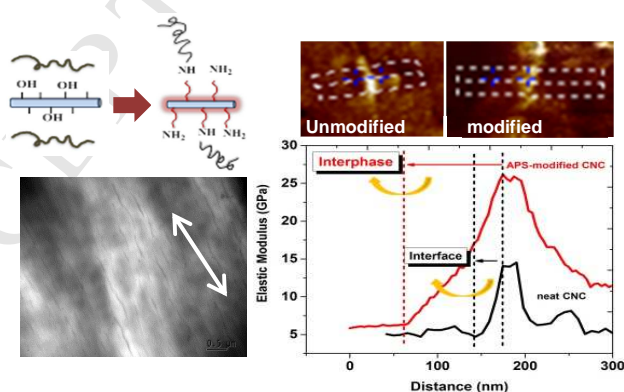

Graphical Abstract

The effects of the interface on microstructure and rheo-mechanical properties of polyamide 6/cellulose nanocrystal nanocomposites prepared by *in-situ* ring-opening polymerization and subsequent melt extrusion

Shahab Kashani Rahimi, and Joshua U Otaigbe*
