Title: Polycrystalline $\text{La}_{1-x}\text{Sr}_x\text{MnO}_3$ Films on Silicon:
Influence of Post-Deposition Annealing on Structural,
(Magneto-)Optical, and (Magneto-)Electrical Properties

Authors: Patrick Thoma, Manuel Monecke, Oana-Maria Buja,

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

BiVO₄ microstructures with various morphologies: synthesis and characterization

Graphical Abstract

Highlights

- BiVO₄ crystals with various shapes were prepared by a hydrothermal method.
- The shape of the BiVO₄ crystals can be tuned by adjusting the Bi³⁺/V⁵⁺ molar ratio.
- The shape has a great effect on the photocatalytic activity of the BiVO₄ crystals.
