Title: Simulation Insight into the Cytochrome c Adsorption on Graphene and Graphene Oxide Surfaces

Authors: Daohui Zhao, Libo Li, Jian Zhou

PII: S0169-4332(17)32838-6
DOI: <https://doi.org/10.1016/j.apsusc.2017.09.190>
Reference: APSUSC 37269

To appear in: *APSUSC*

Received date: 18-5-2017
Revised date: 19-9-2017
Accepted date: 23-9-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Simulation Insight into the Cytochrome c Adsorption on Graphene and Graphene Oxide Surfaces

Graphical abstracts

Favorable adsorption orientation of Cyt c onto graphene oxide surface for ET than that on graphene surface is observed by molecular simulation. This result presents the ET mechanism of Cyt c with graphene-based materials, and further improve and optimize the efficiency of bionic electronic devices.
