Title: Enhanced luminescence of quantum dot/dielectric layer/metal colloid multilayer thin films

Author: Bo-Tau Liu Tai-Hsiang Liao Shiojenn Tseng
Mei-Hua Lee

PII: S0169-4332(13)02277-0
DOI: <http://dx.doi.org/doi:10.1016/j.apsusc.2013.12.019>
Reference: APSUSC 26844

To appear in: *APSUSC*

Received date: 12-11-2013
Revised date: 2-12-2013
Accepted date: 5-12-2013

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Quantum dot hybrid thin films with enhanced photoluminescence (PL) were prepared.
- Optimal excitation wavelength for the hybrid films is controllable.
- Optimal distance and PL enhancement reduced with increase of dielectric constant.
- Decrease of enhancement factor arises from increase of resonant energy transfer.
