Title: Fibrous guided tissue regeneration membrane loaded with anti-inflammatory agent prepared by coaxial electrospinning for the purpose of controlled release

Author: Min He Jiajia Xue Huan Geng Hao Gu Dafu Chen
Rui Shi Liqun Zhang

PII: S0169-4332(15)00332-3
DOI: <http://dx.doi.org/doi:10.1016/j.apsusc.2015.02.037>
Reference: APSUSC 29716

To appear in: *APSUSC*

Received date: 27-11-2014
Revised date: 1-2-2015
Accepted date: 4-2-2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

The metronidazole released from PCL/gelatin core/sheath nanofiber membranes can effectively inhibit the colonization of anaerobic bacteria.
