Effect of sintering temperature rise from 870 to 920°C on physicommechanical and biological quality of nano-hydroxyapatite: An explorative multi-phase experimental in vitro/vivo study

Ahad Khoshzaban, Vahid Rakhshan, Farhood Najafi, Leila Aghajanpour, Seed Jafar Hashemian, Saeed Heidari Keshel, Ikuya Watanabe, Alireza Valanejad, Tahereh Sadat Jafarzadeh Kashi

PII: S0928-4931(16)31125-0

DOI: doi: [10.1016/j.msec.2017.03.183](https://doi.org/10.1016/j.msec.2017.03.183)

Reference: MSC 7695

To appear in: *Materials Science & Engineering C*

Received date: 1 September 2016

Revised date: 4 January 2017

Accepted date: 21 March 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Effect of sintering temperature rise from 870 to 920 °C on physicommechanical and biological quality of nano-hydroxyapatite: an explorative multi-phase experimental in vitro/vivo study
