This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

A self-healing flexible transparent conductor made of copper nanowires and polyurethane

Graphical abstract

Highlights

- Self-healing flexible conductor comprises copper nanowire and polyurethane sheath.
- The nanocomposite conductor exhibits a sheet resistance of $22.3 \Omega \cdot \text{sq}^{-1}$.
- Healing behavior can be repeated 5 times without significant loss of conductivity.
- The nanocomposite conductor sustains large-strain deformation.
