This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Transparent and flexible ultraviolet photoconductors based on solution-processed graphene quantum dots on reduced graphene oxide films

Research Highlights

- Solution-processed for fabrication of transparent and flexible ultraviolet sensing.
- Graphene-platform using reduced graphene oxide and graphene quantum dots.
- High transmittance, good flexibility and photoconductor behaviors.
