Effects of annealing temperature on characteristics of amorphous nickel carbon thin film alloys deposited on n-type silicon substrates by reactive sputtering

Zih-Chen Hong, Sham-Tsong Shiue

PII: S0040-6090(16)30113-4
DOI: doi: [10.1016/j.tsf.2016.04.032](https://doi.org/10.1016/j.tsf.2016.04.032)
Reference: TSF 35165

To appear in: *Thin Solid Films*

Received date: 13 November 2015
Revised date: 18 April 2016
Accepted date: 19 April 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Effects of annealing temperature on characteristics of amorphous nickel carbon thin film alloys deposited on n-type silicon substrates by reactive sputtering
