This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- Segment-scale analytical solution was integrated in existing resolution of the water flow equations in hydraulic architectures
- The new hybrid method improves the accuracy of the solution
- It highlights the numerical errors made by existing approaches
- It can be easily implemented in any existing functional-structural model
