A Physically-Based Fractional Diffusion Model for Semi-Dilute Suspensions of Rods in a Newtonian Fluid

Enrique Nadal, Jose Vicente Aguado,
Emmanuelle Abisset-Chavanne, Francisco Chinesta,
Roland Keunings, Elias Cueto

PII: S0307-904X(17)30401-8
DOI: [10.1016/j.apm.2017.06.009](https://doi.org/10.1016/j.apm.2017.06.009)
Reference: APM 11813

To appear in: *Applied Mathematical Modelling*

Received date: 27 September 2016
Revised date: 19 May 2017
Accepted date: 8 June 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Anomalous diffusion is associated to rods suspensions.
- Fractional Brownian motion allows an adequate modeling.
- A mesoscopic model based on a fractional Fokker-Planck equation is derived.
- Linear viscoelasticity is successfully explained.
- Nonlinear rheology is investigated.
