Kinematic and Dynamic Analysis of the Gantry-tau, a 3-DoF Translational Parallel Manipulator

Alaleh Arian, Behzad Danaei, Hamid Abdi, Saeid Nahavandi

PII: S0307-904X(17)30404-3
DOI: [10.1016/j.apm.2017.06.012](https://doi.org/10.1016/j.apm.2017.06.012)
Reference: APM 11816

To appear in: *Applied Mathematical Modelling*

Received date: 7 October 2016
Revised date: 21 April 2017
Accepted date: 12 June 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A closed-form mathematical model for dynamics of the Gantry-tau is derived.
- Kinematics of the Gantry-tau is formulated and singular conditions are discussed.
- Simulation studies are carried out to assess the performance of the proposed models.
