This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A system identification methodology for parameter-distributed systems is proposed
- The methodology only requires measurements from sparse sensor locations
- The methodology extends the standard lumped-parameter system identification methods
- The methodology is suitable for modelling and model-based indoor climate control
- Results are presented for simulated as well as real systems
