Horizontal water flow in unsaturated porous media using fractional integral method with adaptive time step

Amauri A. Freitas, Daniel G. Alfaro Vigo, Marcello G. Teixeira, Carlos A.B. de Vasconcellos

PII: S0307-904X(17)30181-6
DOI: [10.1016/j.apm.2017.03.032](https://doi.org/10.1016/j.apm.2017.03.032)
Reference: APM 11673

To appear in: *Applied Mathematical Modelling*

Received date: 8 January 2016
Revised date: 4 March 2017
Accepted date: 14 March 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A new numerical schema to solve the problem of horizontal infiltration is proposed
- The numerical results are consistent with experimental data
- This new schema is 900% faster in some examples
- A comparison between our schema, the fractional integral schema and experimental data
- It is considered two different diffusion functions
