This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We develop the call, put and bidirectional option contract models for an agricultural supply chain
- The impact of sales effort on the optimal decisions is investigated
- We compare the optimal decisions and option parameters under different option contracts
- The option contract led by the retailer is introduced to reduce the price fluctuation risk
