Interactive effects of prey refuge and additional food for predator in a diffusive predator-prey system

Subhendu Chakraborty, P.K. Tiwari, S.K. Sasmal, Santanu Biswas, Sabyasachi Bhattacharya, Joydev Chattopadhyay

PII: S0307-904X(17)30177-4
DOI: [10.1016/j.apm.2017.03.028](https://doi.org/10.1016/j.apm.2017.03.028)
Reference: APM 11669

To appear in: *Applied Mathematical Modelling*

Received date: 30 April 2016
Revised date: 1 February 2017
Accepted date: 15 March 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Different types of Turing patterns are obtained.
- Additional food cannot control the prey population when prey refuge is high.
- Low prey refuge and low additional food make spatial distribution complex.
- Low prey refuge and appropriate additional food can control prey (pest).
