This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A problem of half space with randomly varying temperature at boundary is solved.
- Two stochastic type temperature distributions are applied at the boundary plane.
- Integral transform technique and stochastic simulation are applied.
- The effects of stochastic type boundary conditions are highlighted.
- Results are compared with the results for deterministic cases.
