This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A explicit thermal solution for laminated and sandwich beams with arbitrary heat source location is developed.
- The temperature field is approximated as a sum of three 1D separated functions.
- An iterative process is carried out in which three 1D problems are solved successively at each iteration
- Thermo-Mechanical tests for laminated and sandwich beams show the good capability of this method.
