This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Analytical solutions to one-dimensional steady relativistic equations are obtained
- Steady relativistic fluxes are higher than non-relativistic ones
- Traveling-wave solutions are obtained analytically
- Numerical solutions show steep temperature fronts and thermal boundary layers
- Corner regions are formed and their temperature is the initial one
