Development of a slurry abrasion model using an Eulerian-Eulerian  
'two-fluid' approach

Peter Rizkalla , David F. Fletcher

PII: S0307-904X(16)30554-6  
DOI: [10.1016/j.apm.2016.10.039](https://doi.org/10.1016/j.apm.2016.10.039)  
Reference: APM 11400

To appear in: *Applied Mathematical Modelling*

Received date: 22 April 2016  
Revised date: 4 October 2016  
Accepted date: 19 October 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Eulerian multiphase model of slurry erosion developed.
- Considers erosion due to both impact and abrasion.
- Studied effect of fluid viscosity, bend angle, particle concentration and particle size.
- Good agreement with experimental data.
