Investigation of various solution strategies for the time-spectral method for incompressible, viscous flows

S. Baumbach

PII: S0307-904X(16)30617-5
DOI: [10.1016/j.apm.2016.11.012](https://doi.org/10.1016/j.apm.2016.11.012)
Reference: APM 11438

To appear in: *Applied Mathematical Modelling*

Received date: 5 February 2016
Revised date: 17 September 2016
Accepted date: 14 November 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Development of time-spectral solver to solve incompressible flows within a pressure-correction method
- Comparison of different solution strategies employing Jacobi, Gauss-Seidel and GMRES
- Different parallelization strategies to implement time-spectral solver
