This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Unsteady Marangoni convection heat transfer of viscoelastic fluid over flat surface with variable heat flux are investigated.
- Fractional shear stress and Cattaneo heat flux models are introduced firstly in characterizing constitutive relations.
- Numerical solutions are obtained and some novel phenomena are found.
- Effects of fractional derivative, Marangoni number and power law exponent on velocity and temperature fields are analyzed.
