This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- ALT is studied for a general truncated model with multiple nonconstant parameters
- Exact pivotal based point estimates were proposed and compared with MLE
- General, bootstrap and asymptotic intervals are investigated
- Pivotal based estimation methods can be extend to other model and failure samples cases
