This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- A new analytical model for calculating natural frequencies of retaining walls is proposed.
- The effect of soil-structure interaction is considered in the proposed model.
- The accuracy of the proposed method are assessed by comparing its results with the results obtained from FEM analysis.
