This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Exact thermal boundary case is compared with harmonic mean conductivity case.
- Pressure drop of exact thermal boundary is higher than harmonic mean conductivity.
- Bulk temperature is over predicted as much as 13% in harmonic mean conductivity case.
- In harmonic mean conductivity case, over prediction of heat transfer is limited to 8%.
