This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Proposing a new multi-objective algorithm based on ant colony optimization
- Reconstruct the pheromone of the origin algorithm to extends to multi-objective area
- Multi-population ant are used to enhance the searching ability and overcome premature convergence
- Proposing a niche search strategy to improve the solution quality on Pareto front
