This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Both upstream and downstream trade credit are used.
- Assumes a linked to order trade credit is offered to the manufacturer from the supplier,
- Six different situations according to the possible cases are studied.
- The convexity of all cost functions related to all cases is proved.
- Closed-form optimal solutions for production lot size and backlogged shortage are derived.
