This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Versatile framework for deterministic/stochastic simulations of bedload transport
- Consistency between equilibrium, non-equilibrium and ensemble-averaged frameworks
- Sediment diffusion has to be embodied in non-equilibrium bedload transport equations
- Adaptation length depends on the particle diffusivity and the Péclet number
- Improvement of the predictive capability of non-equilibrium bedload equations
