This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Hybrid migration operator is created by using local ring topology.
- Powell's method is amended by adjusting termination criteria and step size.
- Mutation operator is modified by adding a scalar difference to its parent.
- Experimental results are compared with several evolutionary algorithms.
- Effect of operators on performance of PRBBO is discussed.
