Modeling steel rolling processes by fluid-like differential equations

Markus Bambach, Axel-Stefan Hück, Michael Herty

PII: S0307-904X(16)30571-6
DOI: [10.1016/j.apm.2016.10.056](https://doi.org/10.1016/j.apm.2016.10.056)
Reference: APM 11417

To appear in: *Applied Mathematical Modelling*

Received date: 18 June 2015
Revised date: 14 October 2016
Accepted date: 27 October 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

HIGHLIGHTS

- Relevant engineering application treated with novel mathematical methods
- Mathematical modeling of a high-volume steel rolling process using kinetic theory
- Derivation of a model hierarchy and suitable closure relations
- Well-posedness result for derived macroscopic equation
- Uncertainty quantification on initial data
