This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- Mathematical model for dengue epidemic in Bello was fitted to the real data.
- Entomological parameters were obtained from experimental laboratory assays.
- The initial conditions are relevant to fit a mathematical model for dengue.
- The R0 for dengue epidemic in 2010 occurred in Bello ranged between 1.5 and 2.7.
- Transmission probabilities m and h have inverse relationship.
