**Abstract:** This paper investigates the uniqueness and hyperbolicity of the autonomous planar system with zero diagonal coefficient  $\dot{x} = p_2(y)q_2(x)y$ ,  $\dot{y} = p_3(y)q_3(x)x + p_4(y)q_4(x)y$  and the generalized Liénard system  $\dot{x} = \phi(z - F(x))$ ,  $\dot{z} = -g(x)$ . Some sufficient conditions that guarantee the uniqueness and hyperbolicity of limit cycles are established. The results of this paper generalize some previous results on this field.

**Key words:** Autonomous planar systems; Limit cycle; Uniqueness; Hyperbolicity; Exponential asymptoticity.

---
