This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Global embodied energy flows are calculated, and the network is constructed.
- More than 80% of embodied energy is consumed in the national production process.
- Only 0.02% of flows accounts for 80% of embodied energy.
- More than 60% of sectors cluster into the top 3 largest communities.
- Sectors in EU countries cluster into the biggest community.
