This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

1. Implications of improving energy efficiency for water resources are quantified.
2. The saved freshwater withdrawals could support 138,462 households in the UK.
3. Sea water withdrawals are most sensitive to the improvement in energy efficiency.
4. Improving energy efficiency can address emerging energy and water challenges.
