This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

Applying pinch analysis modifies the pyroprocess to decrease the energy consumption.

Pinch analysis provides a conceptual model for benchmarking the energy consumption.

The developed mathematical models target the energy demand of the retrofitted process.

The **benchmark** models **use a few process parameters** with no statistical data.
