This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We investigate the pollution haven hypothesis in Ghana.
- We utilized CO₂ emission as an indicator of air pollution for the period of 1980-2012.
- All variables have positive impact on CO₂ emission except institutional quality.
- **Pollution haven hypothesis confirmed in Ghana.**
