This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Environmental Kuznets Curve hypothesis was testing using ARDL approach for Croatia.
- Results confirm the validity of EKC for Croatia in long run.
- There was bi-directional causality between CO₂ emissions and income in short run.
- There was uni-directional causality from income to CO₂ emissions in long run.
