This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- The effect of the energy demand variation on the PEMFC's efficiency is predicted.
- The model relies on experimental data obtained from a 600 W PEMFC.
- It provides the temperature and the hydrogen consumption with good accuracy.
- The range in which the global energy efficiency could be improved is provided.
