This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Research Highlights

- Natural gas (NG) and electricity prices are interdependent.
- Optimal pricing of NG and electricity is simulated for an integrated network.
- Results confirm that price of NG affects that of electricity and vice versa.
- Electricity locational marginal price is a function of generation cost as well as network contingency status.
- Efficiency improvement for power plant can decrease Electricity locational marginal price.
