DOI: 10.1016/j.energy.2017.01.010
Reference: EGY 10145
To appear in: *Energy*
Received Date: 04 June 2016
Revised Date: 27 December 2016
Accepted Date: 03 January 2017

Please cite this article as: Fang Chen, Jianzhong Zhou, Chao Wang, Chunlong Li, Peng Lu, A modified gravitational search algorithm based on a non-dominated sorting genetic approach for hydro-thermal-wind economic emission dispatching, *Energy* (2017), doi: 10.1016/j.energy.2017.01.010

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- A hybrid algorithm is proposed to handle hydro-thermal-wind power dispatching.
- Several improvement strategies are applied to the algorithm.
- A parallel computing strategy is applied to improve computational efficiency.
- Two cases are analyzed to verify the efficiency of the optimize mode.
