Technical and economic potential of highly efficient boiler technologies in the Korean industrial sector

Nyun-Bae Park, Sang Yong Park, Jong-Jin Kim, Dong Gu Choi, Bo Yeong Yun, Jong Chul Hong

PII: S0360-5442(17)30022-1
DOI: 10.1016/j.energy.2017.01.022
Reference: EGY 10157
To appear in: *Energy*
Received Date: 22 April 2016
Revised Date: 11 October 2016
Accepted Date: 04 January 2017

Please cite this article as: Nyun-Bae Park, Sang Yong Park, Jong-Jin Kim, Dong Gu Choi, Bo Yeong Yun, Jong Chul Hong, Technical and economic potential of highly efficient boiler technologies in the Korean industrial sector, *Energy* (2017), doi: 10.1016/j.energy.2017.01.022

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Research Highlights

- We analyze technical and economic potential of highly efficient boilers in Korea.
- Energy saving potential is 7.9% technically and 5.6% economically by 2035.
- CO₂ reduction potential is 20.7% technically and 6.1% economically by 2035.
- Gas-fired super boiler will be the dominant technology in the mid- to long-term.
