Uncertainties in global radiation time series forecasting using machine learning:
The multilayer perceptron case

Cyril Voyant, Gilles Notton, Christophe Paoli, Alexis Fouilloy, Fabrice Motte

PII: S0360-5442(17)30280-3
DOI: 10.1016/j.energy.2017.02.098
Reference: EGY 10391
To appear in: *Energy*
Received Date: 29 November 2016
Revised Date: 21 January 2017
Accepted Date: 17 February 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Solar irradiation predictions require confidence bands
- There are a lot of kinds of uncertainties to take into account in order to propose prediction bands
- the ranking of different kinds of uncertainties is essential to propose an operational tool for the grid managers
