This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

HIGHLIGHTS OF THE PAPER

1. Experimental study of vortex tube to study effect of insulation on its performance.
2. Development of CFD model to validate experimental data.
3. Validation of experimental results with CFD results as well as analytically developed correlation.
4. Good agreement of present results with other works on non-dimensional basis.
5. Genuine effort to explain the underlying physical mechanism of performance improvement using CFD results.
