This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

Thermodynamic mechanism of solar heat energy-level upgrade was disclosed.

Relations satisfying improved efficiency for solar hybrid systems were given.

Theoretical thermodynamic performances of typical hybrid systems were identified.

Study offers a viable way of utilizing solar energy cost-effectively.
