This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### Highlights

- To examine the relationship between sustainable tourism, energy, health, and wealth in a panel of 37 tourism countries.
- Inbound tourism increases energy demand, health expenditures, income, FDI inflows, trade, and carbon emissions.
- Outbound tourism increases health expenditures.
- Existence of an inverted U-shaped EKC for carbon emissions and GHG emissions.
- The results validate the tourism-led growth hypothesis in a region.
