This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- The top three barriers were “perceived higher initial capital costs”, “uncertain trade-off between environmental and financial benefits” and “lack of government support”.
- The client related barriers had the most significant impacts on project objectives (cost, schedule and quality).
- All barriers had more impact on project cost than schedule and quality.
- The top three most feasible solutions were “government’s co-funding and incentives for training and technologies”, “policies and regulations for green industrial development” and “collaboration with research institutes and firms to study the benefits of GBPs”.
