This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Research Highlights

- The importance of six external forces to SSCM in O&G industry are identified
- A new MCDM method called Best Worst Method (BWM) is used to identify the importance
- The method produces highly consistent pairwise comparisons
- The most important force is economic stability and political stability
- Energy transition is the least important external force to SSCM in the O&G industry
