A Comparison between Pollutants and Greenhouse Gas Emissions from Operation of Different Dryers based on Energy Consumption of Power Plants

Ali Motevali, Seyed Reza Tabatabaei

PII: S0959-6526(17)30690-X
DOI: 10.1016/j.jclepro.2017.03.219
Reference: JCLP 9346
To appear in: *Journal of Cleaner Production*
Received Date: 15 October 2016
Revised Date: 10 January 2017
Accepted Date: 30 March 2017

Please cite this article as: Ali Motevali, Seyed Reza Tabatabaei, A Comparison between Pollutants and Greenhouse Gas Emissions from Operation of Different Dryers based on Energy Consumption of Power Plants, *Journal of Cleaner Production* (2017), doi: 10.1016/j.jclepro.2017.03.219

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlight

- ✓ The lowest and highest GHG production belonged to microwave and vacuum dryer.
- ✓ Solar dryer reduced GHG production than other dryer.
- ✓ GHG emissions increased with increasing temperature and airflow velocity at dryer.
