This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- This study analyzed green development performance from a global perspective.
- Results show that developed regions have been leading in green development.
- While most developing regions' GDPIs are relatively low and in a descending path.
- Living altitude is one of the key factors influencing green development.
- While U-shaped EKC exists between GDPI and economic development level.
