This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- An energy audit is performed at a Moroccan paper industry.
- Energy conservation measures are proposed for electrical and thermal **equipment**
- Energy savings of 11.48 % and 2.22 % are obtained for electrical and thermal energy, respectively
- **283.39 tonnes** of CO₂ emissions can be reduced annually
